
Figure C.6: Sensitivity analysis - parameter θ_D, SA-APAC region. We report the differences in d, c/y, u/y obtained for $\theta_D = 1.2\theta_{D,b}$ and $\theta_d = 0.8\theta_{D,b}$, $\theta_{D,b}$ being the baseline value of the parameter, in case of d we plot $d_{1.2\theta_{D,b}} - d_{0.8\theta_{D,b}}$, see Figure 4 for details and plots of the baseline parameter.

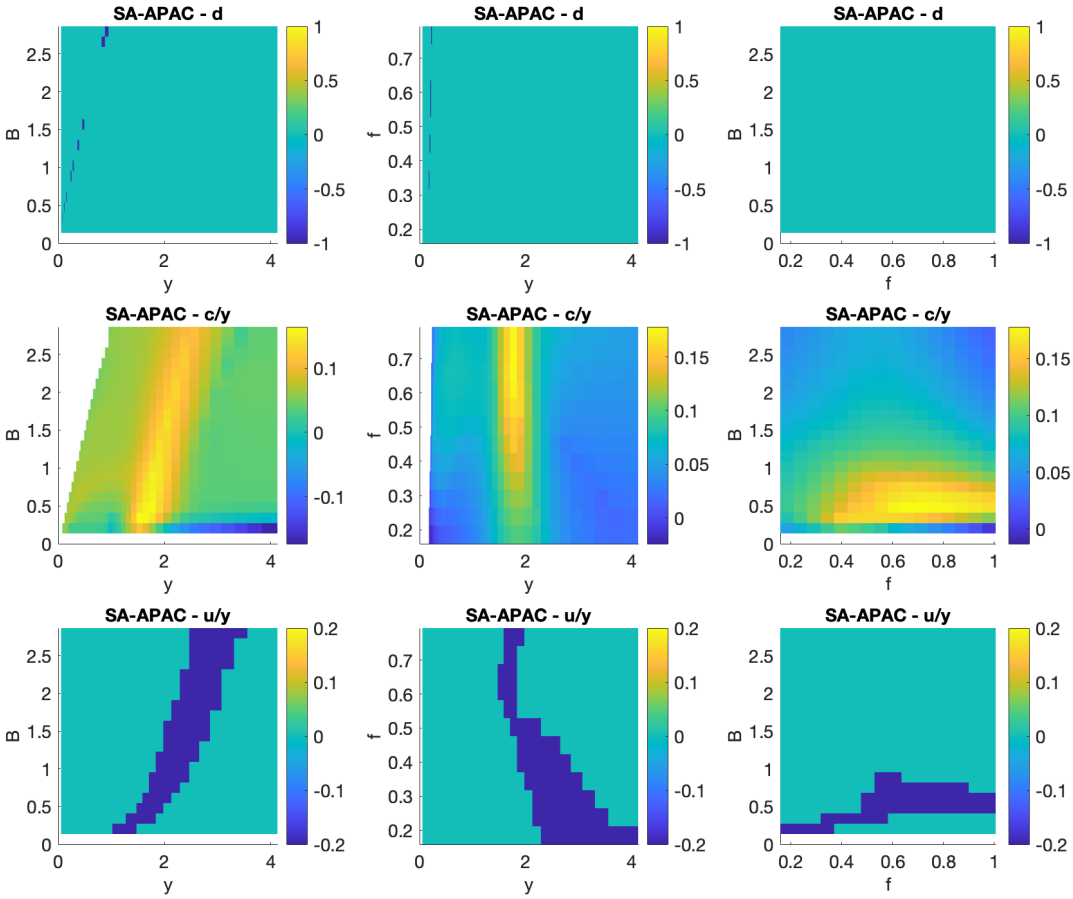

Figure C.7: Sensitivity analysis - parameter φ, SA-APAC region. We report the differences in d, c/y, u/y obtained for $\varphi_f = 1.2\varphi_b$ and $\varphi = 0.8\varphi_b$, φ_b being the baseline value of the parameter, in case of d we plot $d_{1.2\varphi_b} - d_{0.8\varphi_b}$, see Figure 4 for details and plots of the baseline parameter.

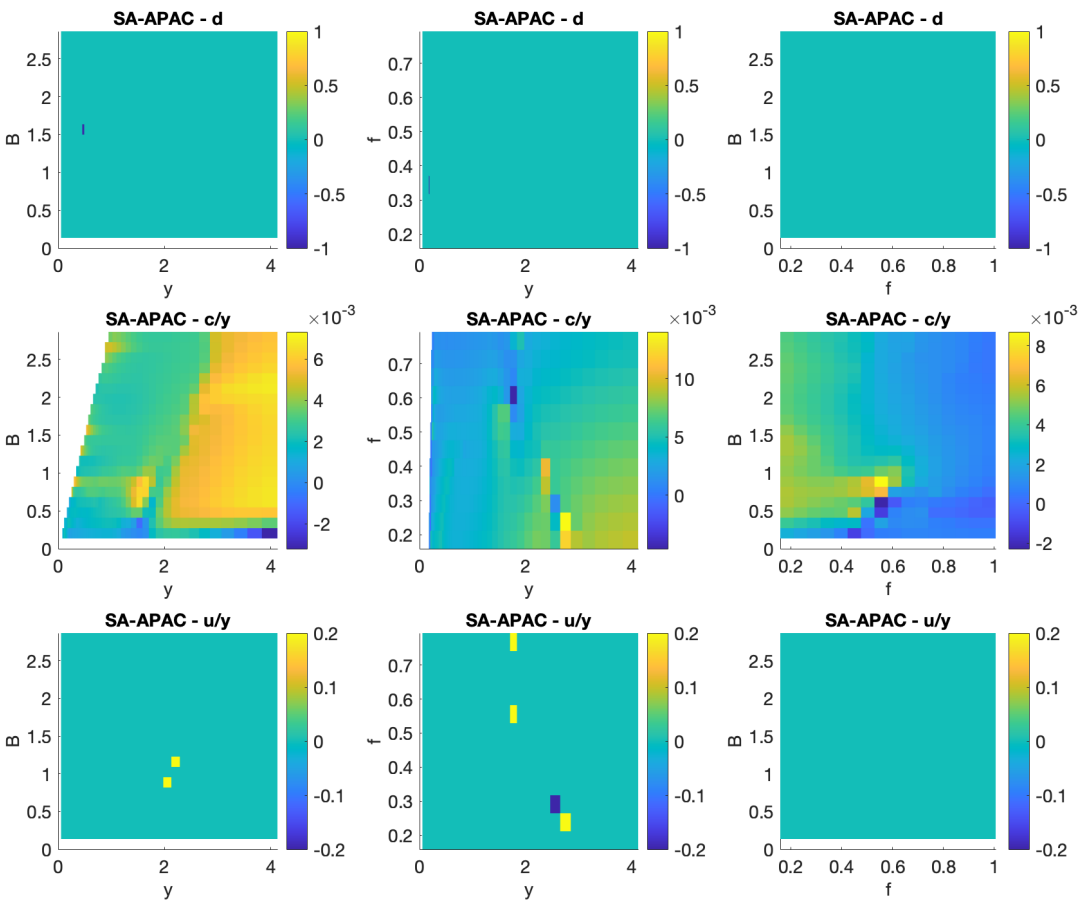

Figure C.8: Sensitivity analysis - parameter g, SA-APAC region. We report the differences in d, c/y, u/y obtained for $g = 1.2g_b$ and $g = 0.8g_b$, g_b being the baseline value of the parameter, in case of d we plot $d_{1.2g_b} - d_{0.8g_b}$, see Figure 4 for details and plots of the baseline parameter.
